### FSC certified papers

In order to use the FSC logo and an environmental claim on paper, the product must be tracked through the FSC chain of custody. This means, the forest, paper producer, paper merchant and printer must all be FSC-certified. For some papers, you must request the 'FSC certified grade'. Label graphics are provided to all certificate holders by their certifier.

FSC certification involves chain of custody accountability. Should a customer decide that they want an FSC certified job there are documentation requirements; starting with the purchase order all the way through to delivery of printed pieces to the customer. The customer must specify before the job becomes a job that they want it to be FSC certified. There are additional processes that need to be followed to ensure that the chain of custody is maintained.

### Recyclable vs. Recycled vs. Post Consumer Waste Recycled

All paper is recyclable. The "recycling symbol" has very little meaning, as it can be used on items which can be "recycled" but may have zero recycled content. Paper which is designated as "recycled" can be a mixture of virgin wood fiber, pre-consumer waste or post-consumer waste. It is important to distinguish between the pre-consumer and post-consumer content in recycled paper. Pre-consumer content is paper made out of paper scraps and trimmings left over from the paper manufacturing process. These paper scraps and trimmings are easiest to recycle, as they do not have to be collected, separated, deinked etc. Post consumer waste (PCW) is paper made out of paper which has been used by the end consumer and then is collected for recycling from various recycling programs. This is the best paper to buy, as it uses and creates demand for paper which would normally end up in the landfill and no trees are cut down for making the paper.

The actual percentage of the recycled and post-consumer recycled content is important to note when buying paper, e.g. 50% recycled 20% PCW, means 50% comes from virgin wood, 30% is pre-consumer recycled and 20% is post-consumer recycled.
